Q2'12 key highlights

Capital markets in Q2'12 and outlook for Q3'12:

- ▶ Q2'12 show relative optimism for capital-raising. However, this optimism is in certain markets.
- ▶ Capital market activity continues to be hampered by lack of investor confidence and economic uncertainty, the latter stems from concern over the ongoing Europe's sovereign-debt crisis and a global economic slowdown.
 - ▶ In May, the equity markets corrected sharply and the CBOE Volatility S&P 500 Index (the VIX index) suddenly increased during the month and reached this year's highest level at start of June before falling steadily during the month of June. This suggests that capital markets may remain volatile in the near term due to deteriorating investor confidence. In fact, the IPO window was effectively shut in May and June in selected markets.
- ▶ However, there are a number of positive signs of global IPO activity and capital markets for Q3'12:
 - ▶ Balanced monetary policy in the developed and emerging economies will be important to restore investor and issuers' confidence.
 - ▶ Divergent macroeconomic conditions should also continue to create pockets of opportunity in the global IPO landscape in second half of 2012.
 - ▶ There is a huge pipeline of private companies globally who are waiting to go public as soon as market conditions improve. They are just waiting for the global market to stabilize, concerns over global growth to dissipate and the IPO window to open.
 - ▶ In the coming months, the windows for completing IPO deals are likely to open and close more quickly and often with little or no warning. Companies need to prepare earlier, and be ready to move fast once a viable market window opens.

CBOE Volatility S&P 500 Index® (VIX®)

At the end of 2011 and for Q1'12, the VIX index reflected an improving environment for IPO candidates. However, the VIX index in May indicated capital markets will remain volatile in the near term due to deteriorating investor confidence.

The VIX index tracks volatility of S&P 500 index options. Often described as “the fear index,” it’s a useful marker of investor sentiment. When the VIX is above the 20%–25% range, it becomes much harder to complete a successful IPO.

Appendix: definitions

- ▶ The data presented in the Ernst & Young *Global IPO trends 2012 report and Q2'12 Global IPO update* and press releases are from Dealogic, Thomson Reuters and Ernst & Young. **The Q2'12 global IPO update covers global IPO activity from January to 21st June 2012.**
- ▶ For the purposes of these reports and press releases, we focus only on IPOs of operating companies and define an IPO as a company's first offering of equity to the public.
- ▶ This report includes only those IPOs for which Dealogic, Thomson Reuters and Ernst & Young offer data regarding the issue date (the day the offer is priced and allocations are subsequently made), trading date (the date on which the security first trades) and proceeds (funds raised, including any over-allotment sold). Postponed IPOs or those which have not yet been priced are therefore excluded. Over-the-counter (OTC) listings are also excluded.
- ▶ In an attempt to exclude non-operating company IPOs such as trusts, funds and special purpose acquisition companies (SPACs), companies with the following Standard Industrial Classification (SIC) codes are excluded:
 - ▶ 6091: Financial companies that conduct trust, fiduciary and custody activities
 - ▶ 6371: Asset management companies such as health and welfare funds, pension funds and their third-party administration as well as other financial vehicles
 - ▶ 6722: Companies that are open-end investment funds
 - ▶ 6726: Companies that are other financial vehicles
 - ▶ 6732: Companies that are grant-making foundations
 - ▶ 6733: Asset management companies that deal with trusts, estates and agency accounts
 - ▶ 6799: Special Purpose Acquisition Companies (SPACs)
- ▶ We also applied the above SIC exclusion criteria for the follow on activity analysis.
- ▶ In our analysis, unless stated otherwise, IPOs are attributed to the domicile of the company undertaking an IPO. The primary exchange on which they are listed is as defined by Dealogic, Thomson Reuters and Ernst & Young research. A foreign listing is where the stock exchange nation of the company is different from the company's domicile (i.e., issuer's nation). For IPO listings on HKEx, SSE, SZE, WSE, NewConnect, TSX and TSX-V exchanges, we use their first trading date in place of issue date.
